

Hey kids, help us take

care of our stream!

October 25, 2009 planting

**Last fall,
you helped
plant trees and shrubs
along Walker Creek**

May 2, 2020 mulching

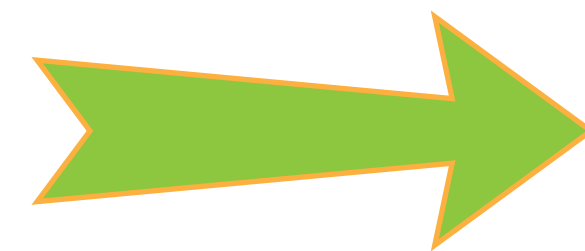

Happy growing plants on May 2, 2020

WHY?

- To make the stream more fun to play at with more places to hide and run around
- To make the stream healthier for young salmon
- To attract different kinds of cool birds and insects

All of our new plants have orange or white tape.

There also are some existing native plants we want to protect. These plants don't have orange tape, but we still want to treat them with kindness.

HOW YOU CAN HELP?

- **Don't trample the new plants – they don't like being stepped on when they're little.**
- **Don't pull off leaves or branches – it hurts the plants.**
- **Don't throw or move around the wood chips – the bark helps keep weeds from growing.**

If we all take care of our plants, they'll grow big and strong. It will make the Swim Club even more fun and help make our stream—and nearby Puget Sound—healthy for fish.
